

## MOXIBUSTION AND OTHER ALTERNATIVES FOR WOMEN WITH BREECH PRESENTATION

Please ask for dates and venues; day can also be delivered in your unit

This study day aims to prepare obstetricians & midwives to use moxibustion as an alternative to ECV for women with breech presentation. It is facilitated by Denise Tiran, Expectancy's Director, midwife, lecturer, author & internationally-renowned expert on maternity complementary medicine. The programme covers an introduction to moxibustion, mechanism of action, safety and the evidence-base, followed by an exploration of the issues related to the implementation of moxibustion within a maternity unit. There is also

a session on other complementary therapies for women with breech presentation, including hypnosis, ginger paste, homeopathic remedies, and the use of natural remedies for women requiring Caesarean section.

For further information please contact Denise Tiran
